Materials for Polyimide Synthesis

Polyimide is a generic name of polymers having imide bonds. Typically they have excellent heat resistance, chemical resistance, electrical insulation, and mechanical strength. Moreover, they have a relatively low coefficient of thermal expansion in organic compounds. And since they have only a few errors from expansion when used at high temperatures, they have been widely used for industrial products. For example

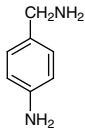

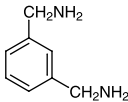

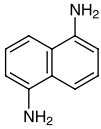

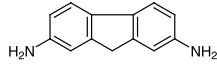

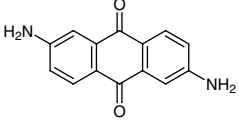

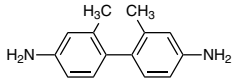

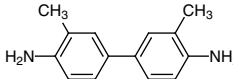

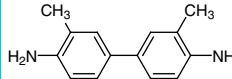

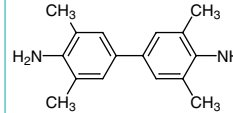

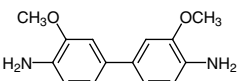

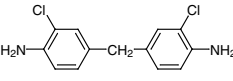

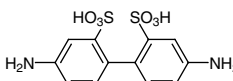

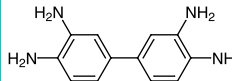

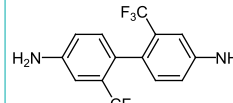

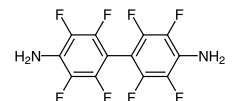

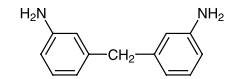

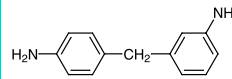

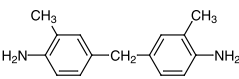

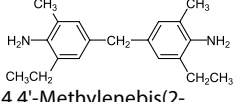

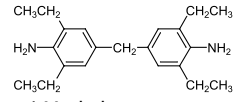

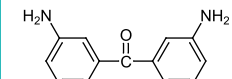

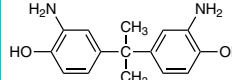

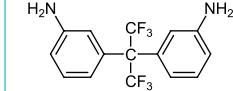

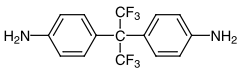

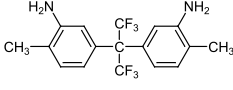

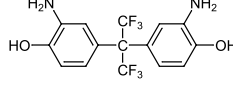

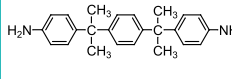

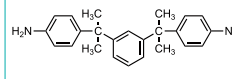

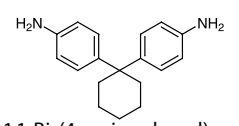

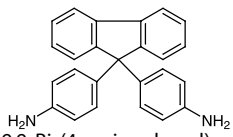

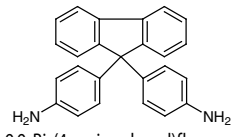

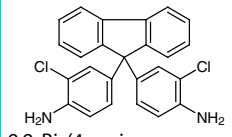

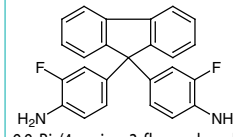

polyimides are used for flexible printed wiring boards in electronic devices, insulating material for electronic circuits and protection films for semiconductors, etc. Also, in the area of liquid crystal displays, polyimides are used as the alignment film to arrange liquid crystal molecules in one direction.

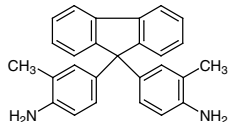

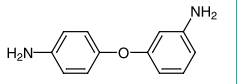

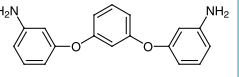

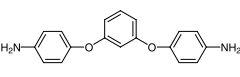

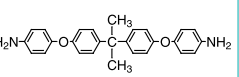

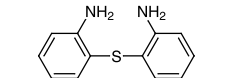

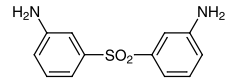

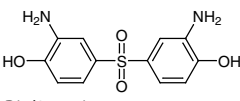

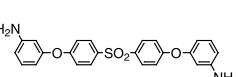

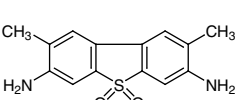

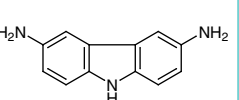

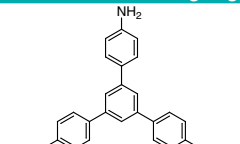

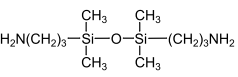

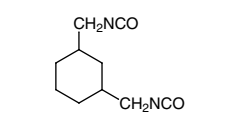

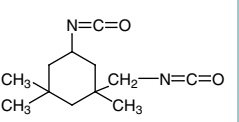

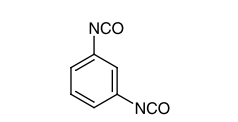

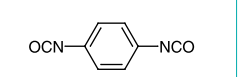

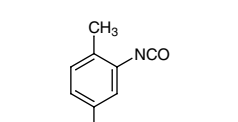

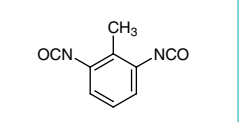

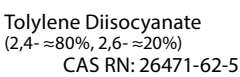

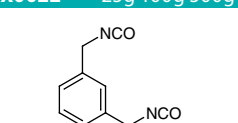

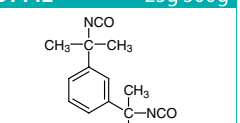

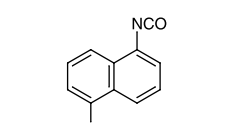

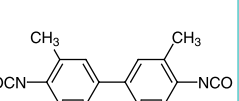

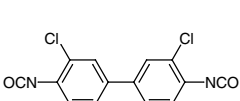

Our products for polyimide synthesis are shown as follows:

Tetracarboxylic Dianhydrides

T2697 1g 5g		T2698 5g 25g		B1770 5g 25g		C2262 1g 5g		C2842 1g 5g
